

# Stream and GAT-Ship Integration

With the Stream and GAT-Ship integration, port agency teams achieve new levels of efficiency and clarity across the whole port call workflow. By minimising time-consuming operational and financial tasks and surfacing key data, agents can respond faster and more accurately - driving faster, more confident decisions and first class customer service.

## Respond quickly and confidently

Never import an email again, enjoying a seamless connection and minimal manual work. Ensure data accuracy and speed across client interactions.

Quickly and easily create standardised email drafts automatically populated with GAT-Ship data

All port calls from GAT-Ship will automatically create a corresponding Job Tag in Sedna, including the port call number and vessel name

Other workflows for Proformas, Enquiries, Client and Vessel communication are also supported by Job Tag creation

## Easily keep track of all port call emails

Take advantage of powerful document and email handling capabilities, keeping visibility and collaboration at the forefront of your port calls. Access a shared audit trail any time so port calls are smooth and on schedule.

Quickly access key data such as voyages, cargoes and schedules

Easily assign work by routing emails to the right team or individual

Prioritise important voyages and get notified of new emails

Use tagged information to easily search and find historical email and context of a voyage

See how the Stream and GAT-Ship integration is taking global trade businesses to new heights:
