

Sedna and AXSMarine integration

The Sedna and AXSMarine integration enables Chartering and Shipbroking teams using AXSDry Shiplist and CargoBook modules to identify and fix lucrative opportunities faster than ever before by enriching Sedna messages with organised open position and cargo data.

USED BY INDUSTRY LEADERS

POWERFUL DATA AT YOUR FINGERTIPS

Save time, don't miss revenue earning opportunities, and accurately fix voyages and charters faster with a seamless integration that embeds Sedna functionality directly into AXSDry.

- Sedna messages are parsed by AXSMarine's AXSReader to automatically create AXSDry Category Tags in Sedna. Messages are automatically tagged and organised for Chartering teams
- Access single or multiple ship lists and cargo data when you need it and launch specific AXSDry ship list and cargo data using the embedded Sedna button

ENSURE DATA ACCURACY

Chartering teams can ensure data accuracy and remove manual work when communicating with contacts and distribution lists, colleagues and other teams by easily sharing up to date position list and cargo data.

- Using the embedded Sedna button, you can automate the pre-population of Sedna messages with curated ship list or cargo data based on defined search criteria right from AXSDry's export menu
