# Sedna and OrbitMI integration

The Sedna and OrbitMI integration empowers vessel owners, operators, and charter teams to quickly get alerts and other contextual information about ongoing voyages from Orbit fed directly into Sedna messages and, through a single click, visualize the route inside Orbit dashboards so you can act faster.

Stena Bulk

POWERFUL DATA AT YOUR FINGERTIPS

Reply faster and automate prioritising and assigning emails through a seamless integration

- Automatically tag Sedna messages with Orbit Job Tags, and keep them organised and routed to the right teams and team members
- Orbit Job Tags can be marked as Important so all emails relating to specific jobs are routed to relevant team members' Important tab
- Quickly access your voyage data, such as status, position, and ETA when you need it by directly retrieving and displaying critical voyage data in the Sedna Context Panel

STAY INFORMED AND ACT FASTER

Action voyage orders faster and stay on top of your voyage with the latest deviation alerts

- Get more context to your messages with the latest ETA, speed or consumption deviation alert from the Context panel
- To see the voyage on a global map and relevant dashboard, click the tagged voyage to open the Orbit unified interface
- Using the embedded Sedna button in Orbit, you can launch Sedna from your chosen voyage and filter your inbox view to surface messages tagged with the voyage
